

Abstract:

'Shimei' is a kiwifruit cultivar newly selected from seedlings of *Actinidia deliciosa*. The fruit is large with a good shape. The flesh is green and juicy with high quality. The average weight of a single fruit is 100 g and the biggest fruit is 170 g in Guilin, Guangxi. The soluble solids concentration is 15%, total sugar 9.47%, total acid 0.73%, vitamin C 138 mg/100 g, and the sugar acid ratio 12.97. Its harvest season is during the first ten days of October, that is about one month later than *A. chinensis* cv. Guihaia 4, which was selected by Guangxi Institute of Botany.
